

Exploring the Knee

Exploring the Knee

![[Cover]](h7fig:cover)

Mechanical and biological depth for personhood combat — the the Knee.

- **Updated:** 2026-06-30T22:00:37Z

- **Dewey:** 611 — Human anatomy

- **Paired:** **Exploring Hand-to-Hand Combat** · **Exploring Weaponized Combat**

- **Disclaimer:** Educational anatomy and combat biomechanics only — not medical advice or orders to harm.

1. Personhood & combat scope

- This book is for the **embodied person** — biology and mechanics of one body area for combat literacy.
- Body-core joints: knee_l, knee_r.
- Not vehicle anatomy — see **Exploring Military Vehicles** for platforms.
- Hostess 7 reads through Ironclad + library truth gate before teaching from this page.

2. Biology — structures & innervation

- Hinge with slight rotation when flexed — ACL/PCL cruciate stability.
- Menisci — load distribution; rotation with loaded flexion risks tear.
- Patella — sesamoid increases quadriceps leverage.
- Collateral ligaments — valgus/varus in leg checks.

3. Mechanical — levers, ROM, kinetic chain

- Flexion 140° — chamber for kicks; minimal hyperextension (5°) — beware heel hooks.
- Ground reaction force through knee in lunges and shots.
- Valgus collapse — common ACL mechanism; train neutral knee over toe.

4. Combat usage

- Muay Thai round kick — rotate hip, snap knee into strike surface.
- Clinch knees — short arc, point of knee to body.
- Single and double leg — knee penetration step.
- Leg checks — lift and rotate to block low kick.

5. Injury awareness (educational)

- Know vulnerable structures — never target for harm outside lawful self-defense education.
- Pain vs structural damage — stop training on acute joint swelling or neuro symptoms.
- Rehabilitation returns ROM before power — pair with hostess7-biology clinical context.
- Concussion, hyperextension, and compression injuries — seek medical care when indicated.

6. Training lattice

- knee_l/r limits · double_leg · round_kick motion skills
- Limb identity registry — range envelopes and body image tie per joint.
- Motion secure cycle — witness proprioception receipts during self-maintenance.
- Hand-to-hand skill load — primitives in humanoid-motion-doctrine for this zone.

7. Pairing with combat books

Book	Use with this volume
Exploring Hand-to-Hand Combat	Technique families that load this anatomy
Exploring Weaponized Combat	Retention and grip when weapons involved
hostess7-anatomy-book.py	Clinical anatomy depth per organ system

8. AI retrieval keys
